

## Streetscape Improvement

- when the street is open for car traffic, vehicles are slowed by the incline of the central platform
- vehicles are also slowed by the change in pavement from asphalt (of adjacent streets) to a paver base of this street

- when the street is closed to traffic of vehicles, concerts, farmer's markets, and outdoor venues may use the area in safety
- the raised platform acts as a stage for performers, and its higher elevation provides greater visibility for crowds watching the show
